CPS714 - Sprint 0

Project Scope & Initial Product Backlog

Project: Small Business Inventory & Sales System
Team: Maria Habib, Walker Egsgard, Gab Talavera

1. Project Scope

Problem:

Small retail businesses often track inventory and sales manually, using spreadsheets or paper records, or no system at all. This leads to stock discrepancies, missed reorders, and no reliable sales history.

Solution:

A web-based system that lets small business owners manage inventory levels, record sales transactions, and view basic reporting, all in one place.

In Scope:

- Inventory tracking (add, edit, remove products, track stock counts)
- Sales/checkout recording
- Low-stock alerts
- Basic sales and inventory reports
- User roles (Admin, Staff)

Out of Scope:

- Multi-location/warehouse support
- Real payment gateway integration
- Automated supplier ordering
- Mobile app version

Stakeholders:

- **Business Owner (Admin) -** manages products, views reports, manages staff accounts
- **Staff / Cashier -** processes sales, checks stock
- **Customer -** indirect stakeholder, benefits from accurate stock and faster checkout

2. Initial Product Backlog (Prioritized)

ID	User Story	Priority
1	Admin creates an account and logs in to securely access the system	High
2	Admin adds new products with name, price, quantity, and category to build out inventory	High
3	Admin edits or deletes existing products to keep inventory accurate	High
4	Staff logs in with limited access to process sales without touching admin settings	High
5	Staff records a sale (selects products, quantities, generates total) and inventory updates automatically	High
6	Admin sees low-stock alerts to know when to reorder	Medium
7	Admin views a sales report (daily/weekly/monthly) to track business performance	Medium
8	Admin categorizes products to make inventory easier to search and manage	Medium
9	Staff searches for a product (by name or SKU) to speed up checkout	Medium
10	Admin exports reports to keep external records	Low
11	Admin manages staff accounts (add, remove, reset password) to control access	Low
12	Admin sees a dashboard summary (total sales, top products, low stock count) for a quick overview	Low

3. Notes

This backlog covers the initial release and will be refined at the start of each sprint. Suggested grouping for future sprints:

Sprint 1: authentication and core inventory
Sprint 2: sales/checkout
Sprint 3: reporting and alerts
Sprint 4: staff management and polish
